How does acne treatment with elōs work?

Acne occurs when a sebaceous oil gland surrounding a hair follicle becomes clogged with oil and dead skin cells. Bacteria growth in this clogged environment causes infection and acne blemishes.

The combined bi-polar radio frequency and blue light energies of elōs technology penetrate the skin to precisely target and destroy active acne-causing bacteria, while also slowing excessive sebaceous oil production. Treatment helps in reducing active acne and speeds up healing time of existing acne.

Is acne treatment with elōs right for me?

elōs is an effective treatment for most skin types.

When can I expect to see results?

The number of treatments depends on the severity of acne. Schedule a consultation to establish your personalized treatment schedule.

Does it hurt?

Acne treatment with elōs is very comfortable and requires no topical anesthetics or other skin preparation. Cooling of the skin surface helps ensure additional safety during treatment. This is a no-downtime procedure. Many patients return to normal activities immediately after treatment.

How much does it cost?

Treatment costs vary. Schedule a personalized consultation for more details.
